SUPERSURV 10 SELECTED FOR COASTAL PROTECTION IN THAILAND

Supergeo is delighted to announce that the cutting-edge mobile GIS app- **SuperSurv 10** has been selected by a government agency that is in charge of protecting marine and coastal resources in Thailand for spatial data collection. For the government authority of environmental protection and ecological monitoring, one of the most important tasks is to patrol the conservation areas and record the species of flora and fauna regularly. To achieve this goal, field workers should bring handheld GNSS devices to the field, activate mobile GIS software to check current position, and record the attributes of specified animals or plants. Based on Android OS, SuperSurv 10 is mobile GIS equipped with both basic and advanced GIS features that can significantly assist spatial data collection. SuperSurv 10 supports offline editing, so field workers can still accomplish their jobs effortlessly even when there is no internet connection.

TERRAGO SOFTWARE UTILIZED FOR OFFICIAL GUIDE TO HONG KONG

TerraGo announced that **Hong Kong** used TerraGo software to design and publish the electronic **Hong Kong Guide**, 2017 edition, which is now available in both Chinese and English, for free download from the Lands Department website. Hong Kong also provides TerraGo desktop software and mobile apps free of charge for citizens and tourists to help them use the guide, personalize maps with notes and photos, and then share them with friends. "Hong Kong saw the opportunity to better engage its citizens and visitors by sharing data-rich yet easy-to-use maps, accessible from any device," said **John Timar, Vice President, Worldwide Sales at TerraGo**. "With free TerraGo apps, anybody can download the guide and then instantly access and update them from any location, even without a network connection, avoiding expensive data charges but most importantly meaning the maps are always available whenever you need it, even when the network isn't." **www.terragotech.com**
