PIX4D LAUNCHES FAST-MAPPING SOFTWARE FOR EMERGENCY RESPONSE AND PUBLIC SAFETY

Pix4D launched **Pix4Dreact**, a new **2D fast-mapping software** tailored specifically to the needs of public safety personnel and first responders. Taking time to deploy and expensive to operate, aircraft and helicopters may not always be readily available or equipped to capture images. Drones are already used to provide powerful visual information that reduces response time and increases safety, but many lack fast-mapping capacity. Teams on the ground need quick and reliable aerial insights to plan and deliver successful operations in remote, complex and often unsafe environments. In response to this need, Pix4D has developed Pix4Dreact to be the optimal 2D fast-mapping desktop software for public safety, emergency management, humanitarian aid and disaster response organizations. Extremely fast and highly intuitive, its key purpose is to help improve situational awareness and effective response in the field when the unexpected occurs: natural disasters, fires, human displacement, missing persons, critical incidents and much more. **www.pix4d.com**

TRIMBLE R12 RECEIVER BOOSTS SURVEYING PERFORMANCE

Trimble introduced the **Trimble R12 GNSS receiver**, a high-performance Global Navigation Satellite System (GNSS) surveying solution. Powered by an all new **Real Time Kinematic (RTK)** and **Trimble RTX positioning engine,** it features ground-breaking **Trimble ProPoint GNSS technology** that empowers land surveyors to quickly measure more points in more places than ever before. Surveyors who work in challenging GNSS environments can use the Trimble R12 receiver to help reduce both the time in the field and the need for conventional techniques such as using a total station. The new state-of-the-art Trimble ProPoint GNSS technology allows for flexible signal management, which helps mitigate the effects of signal degradation and provides a GNSS constellation-agnostic operation. **www.trimble.com**

SXPAD 1500, A RUGGED FIELD DATA COLLECTOR FOR LAND SURVEYING AND GIS

Geneq announced the addition of a new data collector to its SXPad product line. The rugged **SXPad 1500** data collector features a full alphanumeric QWERTY keypad and long-range Bluetooth, and was designed to meet the rigorous IP67 standard to deal with challenging field conditions. The SXPad 1500 and its large 5" touch-screen sunlight-readable display can be connected to any GNSS receiver or compatible robotic total station to ensure the success of all survey projects. Driven by a 1 GHz processor and the Windows Mobile 6.5 operating system, this Field Collector is a high-performance device designed to provide all the power needed to work with maps and large data sets in the field, as well as many software solutions. With its integrated cellular modem and Wi-Fi standard, SXPad 1500 offers wireless connectivity for internet access and GIS data transfer. This feature will be helpful for setting parameters and configuring our SXblue PREMIER and F90 or any RTK compatible GNSS receiver. The SXPad 1500 has a GNSS internal module which delivers adequate performance for certain GIS field data collections. **www.sxbluegps.com**
FAST AND PROFESSIONAL 3D MAPPING SYSTEM WITH HIGH-RES 5K IMAGES

Heron Lite is a solution for fast **3D surveying and mapping** of indoor buildings, small infrastructures, underground mines and cavities. Hand-able from a single person, with no initialization procedure required, it is ideal to quickly and repeatedly survey complex environments. The new Heron Color Lite represent a new step in the fast mapping solutions; besides the 3D geometrical documentation, the user has now the possibility to detect scene details with 5K resolution 360° color images. Gexcel have launched this renewed version during the last Intergeo collected a large interest. **www.gexcel.it**

MaxGo Manager
Smart Mobile Device Management

Introducing MaxGo Manager!

Mobile device management (MDM) is important for today's mobile workforce. Handheld now presents MaxGo Manager, a free MDM software solution for Handheld Android users to remotely and easily configure, manage, troubleshoot and support all of their rugged devices, regardless of deployment size.

A new addition to the MaxGo software suite

The MaxGo Manager is a new addition to the growing suite of MaxGo applications.
The MaxGo Suite also includes MaxGo Staging, MaxGo Kiosk and MaxGo KioskBrowser.
